404– M.Sc. Chemistry

Programme Structure and Scheme of Examination (under CBCS)

(Applicable to the candidates admitted from the academic year 2023 -2024 onwards)

Part	Course Code	Study Components & Course Title	Credit	Hours/ Week	Maximum Marks		
					CIA	ESE	Total
		SEMESTER – I					
A	23PCHEC11	Core – I: Organic Reaction Mechanism-I	5	7	25	75	100
	23PCHEC12	Core – II: Structure and Bonding in Inorganic Compounds and Nuclear Chemistry	5	7	25	75	100
	23PCHEP13	Core – III: Practical – I: Organic Chemistry Practical	4	6	25	75	100
	23PCHEE14-1 23PCHEE14-2	Elective – I: Pharmaceutical Chemistry (or) Nanomaterials and Nanotechnology	3	5	25	75	100
	23PCHEE15-1 23PCHEE15-2	Elective-II Electrochemistry (or) Molecular Spectroscopy	3	5	25	75	100
		Total	20	30			500
		SEMESTER – II					
A	23PCHEC21	Core - IV: Organic Reaction Mechanism–II	5	6	25	75	100
	23PCHEC22	Core - V: Physical Chemistry–I	5	6	25	75	100
	23PCHEP23	Core - VI: Practical – II: Inorganic Chemistry Practical	4	6	25	75	100
	23PCHEE24-1 23PCHEE24-2	Elective – III: Medicinal Chemistry (or) Green Chemistry	3	4	25	75	100
	23PCHEE25-1 23PCHEE25-2	Elective – IV: Bio Inorganic Chemistry (or) Material Science	3	4	25	75	100
B (i)	23PCHE26	Skill Enhancement Course (SEC-I): Industrial Chemistry and Computational Software in Chemistry	2	4	25	75	100
		Total	22	30			600

		SEMESTER – III					
A	23PCHEC31	Core – VII : Physical Chemistry-II	5	6	25	75	100
	23PCHEC32	Core – VIII: Coordination Chemistry-I	5	6	25	75	100
	23PCHEP33	Core – IX : Physical Chemistry Practical	5	6	25	75	100
	23PCHEP34	Core - X: Analytical Instrumentation technique Practicals	4	6	25	75	100
	23PCHEE35-1 or 23PCHEE35-2	Elective V: Pharmacognosy and Phytochemistry OR Biomolecules and Heterocyclic Compounds	3	3	25	75	100
B(i)	23PCHE36	Skill Enhancement Course (SEC-II) : Polymer Chemistry	2	3	25	75	100
B(ii)	23PCHEI37	Summer Internship *	2	-	25	75	100
		Total	26	30			700
		SEMESTER – IV					
A	23PCHEC41	Core -XI: Coordination Chemistry-II	5	6	25	75	100
	23PCHEC42	Core XII - Organic synthesis and Photochemistry	5	6	25	75	100
	23PCHE D43	Project with viva voce	7	10	25	75	100
	23PCHEE44	Elective VI Theory and Preparation of Consumer products (20% Theory + 80% Practical) **	3	4	25	75	100
B (i)	23PCHE345	Skill Enhancement Course (SEC-III) Chemistry for Advanced Research Studies (Practical)	2	4	25	75	100
C	23PCHEX46	Extension Activity	1	-	100		100
		Total	23	30			600
			91				2400

* Students should complete two weeks of internship before the commencement of III semester.

** Evaluation is to be done both for theory (15 marks) and practical (60 marks) components separately by the examiners who will be conducting the practical and the marks should be awarded out of 75. Questions for the theory and practical are to be set by the concerned examiner.

Credit Distribution

Study Components	Papers	Total Credits	Marks/Sub	Total Marks
Core theory	8	40	100	1200
Core Electives	6	18	100	600

B(ii)	Summer Internship	-	-	2	-	2
C	Extension Activity	-	-	-	1	1
						91

Part A and B(i) component will be taken into account for CGPA calculation for the post graduate programme and the other components Part B(ii) and C have to be completed during the duration of the programme as per the norms, to be eligible for obtaining PG degree.

<p>Programme Outcomes (Pos)</p>	<p>PO1: Problem Solving Skill Apply knowledge of Management theories and Human Resource practices to solve business problems through research in Global context.</p> <p>PO2: Decision Making Skill Foster analytical and critical thinking abilities for data-based decision-making.</p> <p>PO3: Ethical Value Ability to incorporate quality, ethical and legal value-based perspectives to all organizational activities.</p> <p>PO4: Communication Skill Ability to develop communication, managerial and interpersonal skills.</p> <p>PO5: Individual and Team Leadership Skill Capability to lead themselves and the team to achieve organizational goals.</p> <p>PO6: Employability Skill Inculcate contemporary business practices to enhance employability skills in the competitive environment.</p> <p>PO7: Entrepreneurial Skill Equip with skills and competencies to become an entrepreneur.</p> <p>PO8: Contribution to Society Succeed in career endeavors and contribute significantly to society.</p> <p>PO 9 Multicultural competence Possess knowledge of the values and beliefs of multiple cultures and a global perspective.</p> <p>PO 10: Moral and ethical awareness/reasoning Ability to embrace moral/ethical values in conducting one's life.</p>
--	--

<p>Programme Specific Outcomes (PSOs)</p>	<p>PSO1 – Placement To prepare the students who will demonstrate respectful engagement with others’ ideas, behaviors, beliefs and apply diverse frames of reference to decisions and actions.</p> <p>PSO 2 - Entrepreneur To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations.</p> <p>PSO3 – Research and Development Design and implement HR systems and practices grounded in research that comply with employment laws, leading the organization towards growth and development.</p> <p>PSO4 – Contribution to Business World To produce employable, ethical and innovative professionals to sustain in the dynamic business world.</p> <p>PSO 5 – Contribution to the Society To contribute to the development of the society by collaborating with stakeholders for mutual benefit.</p>

Core-I	23PCHEC11: ORGANIC REACTION MECHANISM - I	Credit	5
I Year		Hours/	7
I Semester		Week	

Objectives of the course	<p>To understand the feasibility and the mechanism of various organic reactions.</p> <p>To comprehend the techniques in the determination of reaction mechanisms.</p> <p>To understand the concept of stereochemistry involved in organic compounds.</p> <p>To correlate and appreciate the differences involved in the various types of organic reaction mechanisms.</p> <p>To design feasible synthetic routes for the preparation of organic compounds.</p>
Course Outline	<p>UNIT-I: Methods of Determination of Reaction Mechanism: Reaction intermediates, The transition state, Reaction coordinate diagrams, Thermodynamic and kinetic requirements of reactions: Hammond postulate. Methods of determining mechanism: non-kinetic methods - product analysis, determination of intermediates-isolation, detection, and trapping. Cross-over experiments, isotopic labelling, isotope effects and stereochemical evidences. Kinetic methods - relation of rate and mechanism. Effect of structure on reactivity: Hammett and Taft equations. Linear free energy relationship, partial rate factor, substituent and reaction constants.</p> <p>UNIT-II: Aromatic and Aliphatic Electrophilic Substitution: Aromaticity: Aromaticity in benzenoid, non-benzenoid, heterocyclic compounds and annulenes. Aromatic electrophilic substitution: Orientation and reactivity of di- and polysubstituted phenol, nitrobenzene and halobenzene. Reactions involving nitrogen electrophiles: nitration, nitrosation and diazonium coupling; Sulphur electrophiles: sulphonation; Halogen electrophiles: chlorination and bromination; Carbon electrophiles: Friedel-Crafts alkylation, acylation and arylation reactions. Aliphatic electrophilic substitution Mechanisms: S_N2 and S_Ni, S_N1- Mechanism and evidences.</p> <p>UNIT-III: Aromatic and Aliphatic Nucleophilic Substitution: Aromatic nucleophilic substitution: Mechanisms - S_NAr, S_N1 and Benzyne mechanisms - Evidences - Reactivity, Effect of structure, leaving group and attacking nucleophile. Reactions: Oxygen and Sulphur-nucleophiles, Bucherer and Rosenmund reactions, von Richter, Sommelet-Hauser and Smiles rearrangements. S_N1, ion pair, S_N2 mechanisms and evidences. Aliphatic nucleophilic substitutions at an allylic carbon, aliphatic trigonal carbon and vinyl carbon. S_N1, S_N2 and S_Ni, mechanism and evidences, - Ambident nucleophiles.</p> <p>UNIT-IV: Stereochemistry-I: Introduction to molecular symmetry and chirality – axis, plane, center, alternating axis of symmetry. Optical isomerism due to asymmetric and dissymmetric molecules with C, N, S based chiral centers. Topicity and prostereoisomerism, prochirality, enantiotopic and diastereotopic atoms, groups, faces, axial and planar chirality, chirality due to helical shape. Cram's and Prelog's rules: R, S-notations, proR, proS, si-face and re-face Cahn-Ingold-Prelog rules. Configurations of cyclooctene, helicene, binaphthyls, ansa and cyclophanic compounds, exo-cyclic alkylidene-cycloalkanes. Optical purity, criteria for optical purity: Asymmetric synthesis. Stereoselective and stereospecific synthesis.</p> <p>UNIT-V: Stereochemistry-II: Conformation and reactivity of acyclic systems, intramolecular rearrangements, neighbouring group participation, chemical consequence of conformational equilibrium - Curtin-Hammett Principle. Stability of five and six-membered rings: mono-, di- and polysubstituted cyclohexanes, conformation and reactivity in cyclohexane systems. Fused and bridged rings: bicyclic, polycyclic systems, decalins and Bredt's rule. Optical rotation and</p>

	optical rotatory dispersion, conformational asymmetry, ORD curves, octant rule, configuration and conformation, Cotton effect, axial haloketone rule and determination of configuration.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able CLO1: To recall the basic principles of organic chemistry. CLO2: To understand the formation and detection of reaction intermediates of organic reactions. CLO3: To predict the reaction mechanism of organic reactions and stereochemistry of organic compounds. CLO4: To apply the principles of kinetic and non-kinetic methods to determine the mechanism of reactions. CLO5: To design and synthesize new organic compounds by correlating the stereochemistry of organic compounds.

Core-II	23PCHC12: STRUCTURE AND BONDING IN INORGANIC COMPOUNDS AND NUCLEAR CHEMISTRY	Credit	5
I Year		Hours/Week	7
I Semester			
Objectives of the course	<ul style="list-style-type: none"> To determine the structural properties of main group compounds and clusters. To gain fundamental knowledge on the structural aspects of ionic crystals. To familiarize various diffraction and microscopic techniques. To study the effect of point defects and line defects in ionic crystals. To evaluate the structural aspects of solids. To study about stellar energy, nuclear reactions etc and to equip the students for their future career in nuclear industry. 		
Course Outline	<p>UNIT-I: Structure of main group compounds and clusters: Structure of silicates - applications of Paulings rule of electrovalence - isomorphous replacements in silicates – ortho, meta and pyro silicates – one dimensional, two dimensional and three-dimensional silicates. Structural and bonding features of B-N, S-N and P-N compounds; Poly acids – types, examples and structures; Borane cluster: Structural features of closo, nido, arachano and klado; carboranes, hetero and metalloboranes; Wade’s rule to predict the structure of borane cluster; main group clusters – zintl ions and mno rule.</p> <p>UNIT-II: Solid state chemistry: Ionic crystals: Packing of ions in simple, hexagonal and cubic close packing, voids in crystal lattice, Radius ratio, Crystal systems and Bravais lattices, Solid state energetics: Lattice energy – Born-Landé equation - Kapustinski equation, Madelung constant. Structural features of the crystal systems: Rock salt, zinc blende & wurtzite, fluorite and anti-fluorite, rutile and anatase, cadmium iodide and nickel arsenide; Spinels -normal and inverse types and perovskite structures.</p> <p>UNIT-III: Techniques in solid state chemistry: X-ray diffraction technique: Bragg’s law, Powder diffraction method – Principle and Instrumentation; Interpretation of XRD data – JCPDS files, Phase purity, Scherrer formula, lattice constants calculation; Systematic absence of reflections; Electron diffraction technique – principle, instrumentation and application. Electron microscopy – difference between optical and electron microscopy, theory, principle, instrumentation, sampling methods and applications of SEM and TEM.</p> <p>UNIT-IV: Band theory and defects in solids Band theory – features and its application of conductors, insulators and semiconductors, Intrinsic and extrinsic semiconductors; Defects in crystals – point defects (Schottky, Frenkel, metal excess and metal deficient) and their effect on the electrical and optical property, laser and phosphors; Linear defects and its effects due to dislocations.</p> <p>UNIT-V: Nuclear Chemistry Nuclear properties: Nuclear spin and moments, origin of nuclear forces, Modes of radioactive decay: Orbital electron capture, nuclear isomerism, internal conversion. Nuclear reactions: Types, cross section, compound nucleus theory, high energy nuclear, direct nuclear, photonuclear and thermonuclear reactions. Stellar energy: synthesis of elements, hydrogen burning, carbon burning Particle accelerators: Linear accelerators, cyclotron and synchrotron. Radio analytical methods: Isotope dilution analysis, radiometric titrations. Neutron</p>		

	activation analysis.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs)

Students will be able

CO1: Predict the geometry of main group compounds and clusters.

CO2: Explain about the packing of ions in crystals and apply the radius ratio rule to predict the coordination number of cations.

CO3: Understand the various types of ionic crystal systems and analyze their structural features.

CO4: Explain the crystal growth methods.

CO5: To understand the principles of diffraction techniques and microscopic techniques.

Core-III	23PCHEP13: ORGANIC CHEMISTRY PRACTICAL	Credit	4
I Year		Hours/Week	6
I Semester			

Objectives of the course	<ul style="list-style-type: none"> To understand the concept of separation, qualitative analysis and preparation of organic compounds. To develop analytical skill in the handling of chemical reagents for separation of binary and ternary organic mixtures. To analyze the separated organic components systematically and derivative them suitably. To construct suitable experimental setup for the organic preparations involving two stages. To experiment different purification and drying techniques for the compound processing.
Course Outline	<p>UNIT-I: Separation and analysis: Two component mixtures</p> <p>UNIT-II: Estimations:</p> <ol style="list-style-type: none"> Estimation of Phenol (bromination) Estimation of Aniline (bromination) Estimation of Ethyl methyl ketone (iodimetry) Estimation of Glucose (redox) Estimation of Ascorbic acid (iodimetry) Estimation of Aromatic nitro groups (reduction) Estimation of Glycine (acidimetry) Estimation of Formalin (iodimetry) Estimation of Acetyl group in ester (alkalimetry) Estimation of Hydroxyl group (acetylation) Estimation of Amino group (acetylation) <p>UNIT-III: Two stage preparations:</p> <ol style="list-style-type: none"> <i>p</i>-Bromoacetanilide from aniline <i>p</i>-Nitroaniline from acetanilide 1,3,5-Tribromobenzene from aniline Acetyl salicylic acid from methyl salicylate Benzilic acid from benzoin <i>m</i>-Nitroaniline from nitrobenzene <i>m</i>-Nitrobenzoic acid from methyl benzoate
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Elective I	23PCHEE14-1:PHARMACEUTICAL CHEMISTRY	Credit	3
I Year		Hours	5
I Semester		Week	

Objectives of the course	<ul style="list-style-type: none"> To understand the advanced concepts of pharmaceutical chemistry. To recall the principle and biological functions of various drugs. To train the students to know the importance as well the consequences of various drugs. To have knowledge on the various analysis and techniques. To familiarize on the drug dosage and its structural activities.
Course Outline	<p>UNIT-I: Physical properties in Pharmaceuticals: Physical properties of drug molecule: physical properties. Refractive index- Definition, explanation, formula, importance, determination, specific & molar refraction. Optical activity/rotation- monochromatic & polychromatic light, optical activity, angle of rotation, specific rotation examples, measurement of optical activity. Dielectric constant & Induced Polarization- Dielectric constant explanation & determination. Rheology of pharmaceutical systems: Introduction, Definition, Applications, concept of viscosity, Newton's law of flow, Kinematic, Relative, Specific, Reduced & Intrinsic viscosity. Newtonian system, non-Newtonian system- Plastic flow, Pseudoplastic flow, Dilatant flow. Viscosity measurements- selection of viscometer for Newtonian and non-Newtonian system.</p> <p>UNIT-II: Isotopic Dilution analysis: principle and applications, Neutron activation analysis: Principle, advantages and limitations, Scintillation counters: Body scanning. Introduction to radiopharmaceuticals. Properties of various types of radiopharmaceuticals, Radiopharmaceuticals as diagnostics, as therapeutics, for research and sterilization. Physico Chemical Properties and drug action. Physico chemical properties of drugs (a) Partition coefficient, (b) solubility (c) surface activity, (d) degree of ionization.</p> <p>UNIT-III: Drug dosage and product development: Introduction to drug dosage Forms & Drug Delivery system – Definition of Common terms. Drug Regulation and control, pharmacopoeias formularies, sources of drug, drug nomenclature, routes of administration of drugs products, need for a dosage form, classification of dosage forms. Drug dosage and product development. Introduction to drug dosage Forms & Drug Delivery system – Definition of Common terms. Drug Regulation and control, pharmacopoeias formularies, sources of drug, drug nomenclature, routes of administration of drugs products, need for a dosage form, classification of dosage forms.</p> <p>UNIT-IV: Development of new drugs: Introduction, procedure followed in drug design, the research for lead compounds, molecular modification of lead compounds. Structure-Activity Relationship (SAR): Factors affecting bioactivity, resonance, inductive effect, isomerism, bioisosterism, spatial considerations, biological properties of simple functional groups, theories of drug activity, occupancy theory, rate theory, induced-fit theory, 4.3 Quantitative structure activity relationship (QSAR): Development of QSAR, drug receptor interactions, the additivity of group contributions, physico-chemical parameters, lipophilicity parameters, electronic parameter, ionization constants, steric parameters, chelation parameters, redox potential, indicator-variables.</p> <p>UNIT-V: Computers in Pharmaceutical Chemistry: Need of computers for chemistry. Computers for Analytical Chemists-Introduction to computers: Organization of computers, CPU, Computer memory, I/O devices, information storage, software components. Application of computers in chemistry: Programming in high level language (C++) to handle various numerical methods in chemistry – least square fit, solution to simultaneous equations, interpolation, extrapolation, data smoothing, numerical differentiation and integrations.</p>

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able: CO1: To identify the suitable drugs for various diseases. CO2: To apply the principles of various drug action and drug design. CO3: To acquire the knowledge on product development based on SAR. CO4: To apply the knowledge on applications of computers in chemistry. CO5: To synthesize new drugs after understanding the concepts SAR.

Elective I	23PCHEE14-2:NANO MATERIALS AND NANO TECHNOLOGY	Credit	3
I Year		Hours	5
I Semester		Week	

Objectives of the course	<ul style="list-style-type: none"> • To understand the concept of nano materials and nano technology. • To understand the various types of nano materials and their properties. • To understand the applications of synthetically important nano materials. • To correlate the characteristics of various nano materials synthesized by new technologies. • To design synthetic routes for synthetically used new nano materials.
Course Outline	<p>UNIT-I: Introduction of nanomaterials and nanotechnologies, Introduction-role of size, classification-0D, 1D, 2D, 3D. Synthesis-Bottom –Up, Top–Down, consolidation of Nano powders.Features of nanostructures, Background of nanostructures.Techniques of synthesis of nanomaterials, Tools of the nanoscience. Applications of nanomaterials and technologies.</p> <p>UNIT-II: Bonding and structure of the nanomaterials, Predicting the Type of Bonding in a Substance crystal structure.Metallic nanoparticles, Surfaces of Materials, Nanoparticle Size and Properties.Synthesis- Physical and chemical methods - inert gas condensation, arc discharge, laser ablation, sol-gel, solvothermal and hydrothermal-CVD-types, metallo organic, plasma enhanced, and low-pressure CVD. Microwave assisted and electrochemical synthesis.</p> <p>UNIT-III: Mechanical properties of materials, theories relevant to mechanical properties.Techniques to study mechanical properties of nanomaterials, adhesion and friction, thermal properties of nanomaterialsNanoparticles: gold and silver, metal oxides: silica, iron oxide andalumina - synthesisandproperties.</p> <p>UNIT-IV: Electrical properties, Conductivity and Resistivity, Classification of Materials based on Conductivity, magnetic properties, electronic properties of materials. Classification of magnetic phenomena.Semiconductor materials – classification-Ge, Si, GaAs, SiC, GaN, GaP, CdS,PbS. Identification of materials as p and n –type semiconductor-Hall effect - quantum and anomalous, Hall voltage - interpretation of charge carrier density. Applications of semiconductors: p-n junction as transistors and rectifiers, photovoltaic and photogalvanic cell.</p> <p>UNIT-V: Nano thin films, nanocomposites. Application of nanoparticles in different fields. Core-shellnanoparticles-types,synthesis,andproperties.Nanocomposites-metal-,ceramic-andpolymer-matrixcomposites-applications. Characterization– SEM, TEM and AFM - principle,instrumentationand applications.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Elective II	23PCHEE15-1: ELECTROCHEMISTRY	Credit	3
I Year		Hours/Week	5
I Semester			
Objectives of the course	<ul style="list-style-type: none"> To understand the behavior of electrolytes in terms of conductance, ionic atmosphere, interactions. To familiarize the structure of the electrical double layer of different models. To compare electrodes between current density and over potential. To discuss the mechanism of electrochemical reactions. To highlight the different types of over voltages and its applications in electroanalytical techniques. 		
Course Outline	<p>UNIT-I: Ionics: Arrhenius theory -limitations, van't Hoff factor and its relation to colligative properties. Deviation from ideal behavior. Ionic activity, mean ionic activity and mean ionic activity coefficient-concept of ionic strength, Debye Huckel theory of strong electrolytes, activity coefficient of strong electrolytes Determination of activity coefficient ion solvent and ion-ion interactions. Born equation. Debye-Huckel Bjerrum model. Derivation of Debye-Huckel limiting law at appreciable concentration of electrolytes modifications and applications. Electrolytic conduction-Debye-Huckel Onsager treatment of strong electrolyte-qualitative and quantitative verification and limitations. Evidence for ionic atmosphere. Ion association and triple ion formations.</p> <p>UNIT-II: Electrode-electrolyte interface: Interfacial phenomena -Evidences for electrical double layer, polarizable and non-polarizable interfaces, Electrocapillary phenomena - Lippmann equation electro capillary curves. Electro-kinetic phenomena electro-osmosis, electrophoresis, streaming and sedimentation potentials, colloidal and poly electrolytes. Structure of double layer: Helmholtz -Perrin, Guoy- Chapman and Stern models of electrical double layer. Zeta potential and potential at zero charge. Applications and limitations.</p> <p>UNIT-III: Electrodics of Elementary Electrode Reactions: Behavior of electrodes: Standard electrodes and electrodes at equilibrium. Anodic and Cathodic currents, condition for the discharge of ions. Nernst equation, polarizable and non-polarizable electrodes. Model of three electrode system, over potential. Rate of electro chemical reactions: Rates of simple elementary reactions. Butler-Volmer equation-significance of exchange current density, net current density and symmetry factor. Low and high field approximations. symmetry factor and transfer coefficient Tafel equations and Tafel plots.</p> <p>UNIT-IV: Electrodics of Multistep Multi Electron System: Rates of multi-step electrode reactions, Butler - Volmer equation for a multi-step reaction. Rate determining step, electrode polarization and depolarization. Transfer coefficients, its significance and determination, Stoichiometric number. Electro-chemical reaction mechanisms-rate expressions, order, and surface coverage. Reduction of I_3^-, Fe^{2+}, and dissolution of Fe to Fe^{2+}. Overvoltage - Chemical and electro chemical, Phase, activation and concentration over potentials. Evolution of oxygen and hydrogen at different pH. Pourbiac and Evan's diagrams.</p> <p>UNIT-V: Concentration Polarization, Batteries and Fuel cells: Modes of Transport of electro active species - Diffusion, migration and hydrodynamic modes. Role of supporting electrolytes. Polarography-principle and applications. Principle of square wave polarography. Cyclic voltammetry- anodic and cathodic stripping voltammetry and differential pulse voltammetry. Sodium and lithium-ion batteries and redox flow batteries. Mechanism of charge storage: conversion and alloying. Capacitors- mechanism of energy storage, charging at constant current and constant voltage. Energy production systems: Fuel Cells: classification, alkaline fuel cells, phosphoric acid fuel cells, high temperature fuel cells.</p>

Elective II	23PCHEE15 -2 : MOLECULAR SPECTROSCOPY	Credit	3
I Year		Hours/Week	5
I Semester			
Objectives of the course	<p>To understand the influence of rotation and vibrations on the spectra of the polyatomic molecules.</p> <p>To study the principle of Raman spectroscopy, ESR spectroscopy, EPR spectroscopy and fragmentation patterns in Mass spectroscopy.</p> <p>To highlight the significance of Franck-Condon principle to interpret the selection rule, intensity and types of electronic transitions.</p> <p>To interpret the first and second order NMR spectra in terms of splitting and coupling patterns using correlation techniques such as COSY, HETCOR, NOESY.</p> <p>To carry out the structural elucidation of molecules using different spectral techniques.</p>		
Course Outline	<p>UNIT-I: Rotational and Raman Spectroscopy: Rotational spectra of diatomic and polyatomic molecules. Intensities of rotational spectral lines, effect of isotopic substitution. Non-rigid rotators. Classical theory of the Raman effect, polarizability as a tensor, polarizability ellipsoids, quantum theory of the Raman effect, Pure rotational Raman spectra of linear and asymmetric top molecules, Stokes and anti-Stokes lines. Vibrational Raman spectra, Raman activity of vibrations, rule of mutual exclusion, rotational fine structure-O and S branches, Polarization of Raman scattered photons.</p> <p>UNIT-II: Vibrational Spectroscopy: Vibrations of molecules, harmonic and anharmonic oscillators- vibrational energy expression, energy level diagram, vibrational wave functions and their symmetry, selection rules, expression for the energies of spectral lines, computation of intensities, hot bands, effect of isotopic substitution. Diatomic vibrating rotor, vibrational-rotational spectra of diatomic molecules, P, R branches, breakdown of the Born-Oppenheimer approximation. Vibrations of polyatomic molecules – symmetry properties, overtone and combination frequencies. Influence of rotation on vibrational spectra of polyatomic molecule, P, Q, R branches, parallel and perpendicular vibrations of linear and symmetric top molecules.</p> <p>UNIT-III: Electronic spectroscopy: Electronic Spectroscopy: Electronic spectroscopy of diatomic molecules, Frank-Condon principle, dissociation and predissociation spectra. $\pi \rightarrow \pi^*$, $n \rightarrow \pi^*$ transitions and their selection rules. Photoelectron Spectroscopy: Basic principles, photoelectron spectra of simple molecules, Xray photoelectron spectroscopy (XPS). Lasers: Laser action, population inversion, properties of laser radiation, examples of simple laser systems.</p> <p>UNIT-IV: NMR and ESR spectroscopy: Chemical shift, Factors influencing chemical shifts: Mechanism of shielding and deshielding. Spin systems: First order and second order coupling of AB systems, Simplification of complex spectra. Spin-spin interactions: Homonuclear coupling interactions - AX, AX₂, AB types. Vicinal, germinal and long-range coupling-spin decoupling. Nuclear Overhauser effect (NOE), Factors influencing coupling constants and Relative intensities. ¹³CNMR and structural correlations. Brief introduction to 2D NMR – COSY, NOESY.</p> <p>ESR spectroscopy Characteristic features of ESR spectra, line shapes and line widths; ESR spectrometer. The g value and the hyperfine coupling parameter (A), origin of hyperfine interaction. Interpretation of ESR spectra and structure elucidation of organic radicals using ESR spectroscopy; Spin orbit coupling and significance of g-tensors, zero/non-zero field splitting, Kramer's degeneracy, application to transition metal complexes and inorganic free radicals.</p>		

	UNIT-V: Mass Spectrometry and Mossbauer Spectroscopy: Ionization techniques- Electron ionization (EI), chemical ionization (CI), desorption ionization (FAB/MALDI), electrospray ionization (ESI), isotope abundance, molecular ion, fragmentation processes of organic molecules, deduction of structure through mass spectral fragmentation, high resolution. Effect of isotopes on the appearance of mass spectrum. Principle of Mossbauer spectroscopy: Doppler shift, recoil energy. Isomer shift, quadrupole splitting, magnetic interactions. Applications: Mossbauer spectra of high and low-spin Fe and Sn compounds.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Course Learning Outcomes (for Mapping with POs and PSOs)

Students will be able:

CO1: To understand the importance of rotational and Raman spectroscopy.

CO2: To apply the vibrational spectroscopic techniques to diatomic and polyatomic molecules.

CO3: To evaluate different electronic spectra of simple molecules using electronic spectroscopy.

CO4: To outline the NMR, ^{13}C NMR, 2D NMR – COSY, NOESY, Introduction to ^{31}P , ^{19}F NMR.

CO5: To develop the knowledge on principle, instrumentation and structural elucidation of simple molecules using Mass Spectrometry.

Core –IV	23PCHC21 : ORGANIC REACTION MECHANISM-II	Credit	5
I Year		Hours/Week	6
II Semester			
Objectives of the course	<p>To understand the concept of aromaticity in benzenoid, non-benzenoid, heterocyclic and annulene compounds.</p> <p>To understand the mechanism involved in various types of organic reactions with evidences.</p> <p>To understand the applications of synthetically important reagents.</p> <p>To correlate the reactivity between aliphatic and aromatic compounds.</p> <p>To design synthetic routes for synthetically used organic reactions.</p>		
Course Outline	<p>UNIT-I: Elimination and Free Radical Reactions: Mechanisms: E2, E1, and E1cB mechanisms. Syn- and anti-eliminations. Orientation of the double bond: Hoffmann and Saytzeff rules. Reactivity: Effect of substrate, attacking bases, leaving group and medium. Stereochemistry of eliminations in acyclic and cyclic systems, pyrolytic elimination.</p> <p>Long lived and short-lived radicals – Production of radicals by thermal and photochemical reactions, Detection and stability of radicals, characteristics of free radicals. Reactions of radicals; polymerization, addition, halogenations, aromatic substitutions, rearrangements. Reactivity on aliphatic, aromatic substrates, reactivity in the attacking radical, effect of solvent.</p> <p>UNIT-II: Oxidation and Reduction Reactions:</p> <p>Mechanisms: Direct electron transfer, hydride transfer, hydrogen transfer, displacement, addition-elimination, oxidative and reductive coupling reactions.</p> <p>Mechanism of oxidation reactions: Dehydrogenation by quinones, selenium dioxides, ferricyanide, lead tetraacetate, manganese dioxide, osmium tetroxide, oxidation of saturated hydrocarbons, alkyl groups, alcohols, halides and amines. Reactions involving cleavage of C-C bonds - cleavage of double bonds, oxidative decarboxylation, allylic oxidation, oxidation by chromium trioxide-pyridine, DMSO-Oxalyl chloride (Swern oxidation) and Corey-Kim oxidation, dimethyl sulphoxide- dicyclohexyl carbodiimide (DMSO-DCCD). Mechanism of reduction reactions: Wolff-Kishner, Clemmensen, Rosenmund, reduction with Trialkyl and triphenyltin hydrides, Homogeneous hydrogenation, Hydroboration with cyclic systems, MPV and Bouveault-Blanc reduction.</p> <p>UNIT-III: Rearrangements: Rearrangements to electron deficient carbon: Pinacol-pinacolone and semi-pinacolone rearrangements -applications and stereochemistry, Wagner-Meerwein, Demjanov, Dienone-phenol, Baker-Venkataraman, Benzilic acid and Wolff rearrangements. Hofmann, Curtius, Schmidt, Lossen, Beckmann and abnormal Beckmann rearrangements. Baeyer-Villiger oxidation and Dakin rearrangements. Favorskii, Stevens, Wittig rearrangements. Fries and Photo Fries rearrangement. Intramolecular rearrangements – Claisen, Cope, oxy-Cope and Benzidine rearrangements.</p> <p>UNIT-IV: Addition to Carbon Multiple Bonds: Mechanisms: (a) Addition to carbon-carbon multiple bonds- Addition reactions involving electrophiles, nucleophiles, free radicals, carbenes and cyclic mechanisms-Orientation and reactivity, hydrogenation of double and triple bonds, Michael reaction, addition of oxygen and Nitrogen; (b) Addition to carbon-hetero atom multiple bonds: Mannich reaction, acids, esters, nitrites, addition of Grignard reagents, Wittig reaction, Prins reaction. Stereochemical aspects of addition reactions. Addition of organozinc and organolithium reagents to carbonyl compounds. Mechanism of condensation reactions involving enolates –Stobbe reactions.</p>		

	UNIT-V: Reagents and Modern Synthetic Reactions: Lithium diisopropylamine (LDA), Azobisisobutyronitrile (AIBN), Sodium cyanoborohydride (NaBH_3CN), <i>meta</i> -Chloroperbenzoic acid (m-CPBA), Dimethyl aminopyridine (DMAP), $n\text{-Bu}_3\text{SnD}$, Triethylamine (TEA), Diazobicyclo[5.4.0]undec-7-ene (DBU), Diisopropylazodicarboxylate (DIAD), Diethylazodicarboxylate (DEAD), <i>N</i> -bromosuccinimide (NBS), Trifluoroacetic acid (TFA), Tetramethyl piperidin-1-oxyl (TEMPO). Diazomethane and Zn-Cu, Diethyl maleate (DEM), Copper diacetylacetonate ($\text{Cu}(\text{acac})_2$), TiCl_3 , NaIO_4 , Pyridinium chlorochromate (PCC), Pyridinium dichromate (PDC), Meisenheimer complex. Suzuki coupling, Heck reaction, Negishi reaction, Baylis-Hillman reaction.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Core – V	23PCHEC22 : PHYSICAL CHEMISTRY-I	Credit	5
I Year		Hours/ Week	6
II Semester			

Objectives of the course	<ul style="list-style-type: none"> To recall the fundamentals of thermodynamics and the composition of partial molar quantities. To understand the classical and statistical approach of the functions To compare the significance of Maxwell-Boltzman, Fermi-Dirac and Bose-Einstein To correlate the theories of reaction rates for the evaluation of thermodynamic parameters. To study the mechanism and kinetics of reactions.
Course Outline	<p>UNIT-I: Classical Thermodynamics: Partial molar properties-Chemical potential, Gibb's-Duhem equation-binary and ternary systems. Determination of partial molar quantities. Thermodynamics of real gases - Fugacity- determination of fugacity by graphical and equation of state methods-dependence of temperature, pressure and composition. Thermodynamics of ideal and non-ideal binary mixtures, Duhem - Margulus equation applications of ideal and non-ideal mixtures. Activity and activity coefficients-standard states -determination-vapour pressure, EMF and freezing point methods.</p> <p>UNIT-II: Statistical thermodynamics: Introduction of statistical thermodynamics concepts of thermodynamic and mathematical probabilities-distribution of distinguishable and non-distinguishable particles. Assemblies, ensembles, canonical particles. Maxwell - Boltzmann, Fermi Dirac & Bose-Einstein Statistics- comparison and applications. Partition functions-evaluation of translational, vibrational and rotational partition functions for monoatomic, diatomic and polyatomic ideal gases. Thermodynamic functions in terms of partition functions-calculation of equilibrium constants. Statistical approach to Thermodynamic properties: pressure, internal energy, entropy, enthalpy, Gibb's function, Helmholtz function residual entropy, equilibrium constants and equipartition principle. Heat capacity of mono and diatomic gases-ortho and para hydrogen. Heat capacity of solids-Einstein and Debye models.</p> <p>UNIT-III: Irreversible Thermodynamics: Theories of conservation of mass and energy entropy production in open systems by heat, matter and current flow, force and flux concepts. Onsager theory-validity and verification- Onsager reciprocal relationships. Electro kinetic and thermo mechanical effects- Application of irreversible thermodynamics to biological systems.</p> <p>UNIT-IV: Kinetics of Reactions: Theories of reactions-effect of temperature on reaction rates, collision theory of reaction rates, Unimolecular reactions - Lindeman and Christiansen hypothesis- molecular beams, collision cross sections, effectiveness of collisions, Potential energy surfaces. Transition state theory-evaluation of thermodynamic parameters of activation-applications of ARRT to reactions between atoms and molecules, time and true order-kinetic parameter evaluation. Factors determine the reaction rates in solution - primary salt effect and secondary salt effect, Homogeneous catalysis- acid- base catalysis-mechanism of acid base catalyzed reactions-Bronsted catalysis law, enzyme catalysis-Michelis-Menton catalysis.</p>

	UNIT-V: Kinetics of complex and fast reactions: Kinetics of complex reactions, reversible reactions, consecutive reactions, parallel reactions, chain reactions. Chain reactions-chain length, kinetics of $H_2 - Cl_2$ & $H_2 - Br_2$ reactions (Thermal and Photochemical reactions) - Rice Herzfeld mechanism. Study of fast reactions-relaxation methods- temperature and pressure jump methods electric and magnetic field jump methods -stopped flow flash photolysis methods and pulse radiolysis. Kinetics of polymerization-free radical, cationic, anionic polymerization - Polycondensation.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Core – VI	23PCHEP23 : INORGANIC CHEMISTRY PRACTICAL	Credit	4
I Year		Hours/ Week	6
II Semester			

Objectives of the course	<ul style="list-style-type: none"> To understand and enhance the visual observation as an analytical tool for the quantitative estimation of ions. To recall the principle and theory in preparing standard solutions. To train the students for improving their skill in estimating the amount of ion accurately present in the solution To estimate metal ions, present in the given solution accurately without using instruments. To determine the amount of ions, present in a binary mixture accurately.
Course Outline	<p>UNIT-I: Analysis of mixture of cations: Analysis of a mixture of four cations containing two common cations and two rare cations. Cations to be tested.</p> <p>Group-I: W, Tl and Pb.</p> <p>Group-II : Se, Te, Mo, Cu, Bi and Cd.</p> <p>Group-III : Tl, Ce, Th, Zr, V, Cr, Fe, Ti and U.</p> <p>Group-IV : Zn, Ni, Co and Mn.</p> <p>Group-V : Ca, Ba and Sr.</p> <p>Group-VI : Li and Mg.</p> <p>UNIT-II: Preparation of metal complexes: Preparation of inorganic complexes:</p> <ol style="list-style-type: none"> Preparation of trithioureacopper(I) sulphate Preparation of potassium trioxalate chromate(III) Preparation of tetramminecopper(II) sulphate Preparation of Reineck's salt Preparation of hexathioureacopper(I) chloridedihydrate Preparation of <i>cis</i>-Potassium tri oxalate diaquachromate(III) Preparation of sodium trioxalato ferrate(III) Preparation of hexathiourealead(II) nitrate <p>UNIT-III: Complexometric Titration:</p> <ol style="list-style-type: none"> Estimation of zinc, nickel, magnesium, and calcium. Estimation of mixture of metal ions-pH control, masking and demasking agents. Determination of calcium and lead in a mixture (pH control). Determination of manganese in the presence of iron. Determination of nickel in the presence of iron.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Elective III	23PCHEE24-1 : MEDICINAL CHEMISTRY	Credit	3
I Year		Hours/Week	4
II Semester			

Objectives of the course	<ul style="list-style-type: none"> To gain knowledge on mechanism and action of drugs. To understand the need of antibiotics and usage of drugs. To study the chemistry behind antihypertensive agents. To familiarize with the mode of action of diabetic agents and treatment of diabetes. To identify and apply the action of analgesics and antipyretic drugs.
Course Outline	<p>UNIT-I: Introduction to receptors: Introduction, targets, Agonist, antagonist, partial agonist. Receptors, Receptor types, Theories of Drug – receptor interaction, Drug synergism, Drug resistance, physicochemical factors influencing drug action.</p> <p>UNIT-II: Antibiotics: Introduction, Targets of antibiotics action, classification of antibiotics, enzyme-based mechanism of action, SAR of penicillins and tetracyclins, clinical application of penicillins, cephalosporin Current trends in antibiotic therapy.</p> <p>UNIT-III: Antihypertensive agents and diuretics: Classification of cardiovascular agents, introduction to hypertension, etiology, types, classification of antihypertensive agents, classification and mechanism of action of diuretics, Furosemide, Hydrochlorothiazide, Amiloride.</p> <p>UNIT-IV: Antidiabetic agents and Antifungal agents: Introduction, Types of diabetics, Drugs used for the treatment, chemical classification, Mechanism of action, Treatment of diabetic mellitus. Chemistry of insulin, sulfonylurea. Clotrimazole, Econazole, Butoconazole, Oxiconazole, Tioconazole, Miconazole.</p> <p>UNIT-V: Analgesics, and Antipyretics Drugs: Introduction, Mechanism of inflammation, classification and mechanism of action, Paracetamol, Ibuprofen, Diclofenac, Naproxen, Indomethacin, Phenylbutazone and Meperidine.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge about mechanism of action of drugs, Problem solving, identify various drugs.

Elective III	23PCHEE24-2 : GREEN CHEMISTRY	Credit	3
I Year		Hours /Week	4
II Semester			

Objectives of the course	<ul style="list-style-type: none"> To discuss the principles of green chemistry, To propose green solutions for chemical energy storage and conversion. To propose green solutions for industrial production of Petroleum and Petrochemicals. To propose solutions for pollution prevention in Industrial chemical and fuel production, Automotive industry and Shipping industries. To propose green solutions for industrial production of Surfactants, Organic and inorganic chemicals.
Course Outline	<p>UNIT-I: Introduction- Need for Green Chemistry. Goals of Green Chemistry. Limitations/ of Green Chemistry. Chemical accidents, terminologies, International green chemistry organizations and Twelve principles of Green Chemistry with examples.</p> <p>UNIT-II: Choice of starting materials, reagents, catalysts and solvents in detail, Green chemistry in day today life. Designing green synthesis-green reagents: dimethyl carbonate. Green solvents: Water, Ionic liquids-criteria, general methods of preparation, effect on organic reaction. Supercritical carbon dioxide- properties, advantages, drawbacks and a few examples of organic reactions in scCO₂. Green synthesis-adipic acid and catechol.</p> <p>UNIT-III: Environmental pollution, Green Catalysis-Acid catalysts, Oxidation catalysts, Basic catalysts, Polymer supported catalysts-Poly styrene aluminum chloride, polymeric super acid catalysts, Poly supported photosensitizers.</p> <p>UNIT-IV: Phase transfer catalysis in green synthesis-oxidation using hydrogen peroxide, crown ethers-esterification, saponification, anhydride formation, Elimination reaction, Displacement reaction. Applications in organic synthesis.</p> <p>UNIT-V: Micro wave induced green synthesis-Introduction, Instrumentation, Principle and applications. Sonochemistry – Instrumentation, Cavitation theory - Ultra sound assisted green synthesis and Applications.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Elective IV	23PCHEE25-1:BIO-INORGANIC CHEMISTRY	Credit	3
I Year		Hours/Week	4
II Semester			

Objectives of the course	<ul style="list-style-type: none"> To understand the role of trace elements. To understand the biological significance of iron, sulphur. To study the toxicity of metals in medicines. To have knowledge on diagnostic agents. To discuss on various metalloenzymes properties.
Course Outline	<p>UNIT-I: Essential trace elements: Selective transport and storage of metal ions: Ferritin, Transferrin and siderophores; Sodium and potassium transport, Calcium signalling proteins. Metalloenzymes: Zinc enzymes–carboxypeptidase and carbonic anhydrase. Ironenzymes–catalase, peroxidase. Copperenzymes – superoxide dismutase, Plastocyanin, Ceruloplasmin, Tyrosinase. Coenzymes - Vitamin-B12 coenzymes.</p> <p>UNIT-II: Transport Proteins: Oxygen carriers-Hemoglobin and myoglobin - Structure and oxygenation Bohr Effect. Binding of CO, NO, CN– to Myoglobin and Hemoglobin. Biological redox system: Cytochromes-Classification, cytochrome a, b and c. Cytochrome P-450. Non-heme oxygen carriers-Hemerythrin and hemocyanin. Iron-sulphur proteins- Rubredoxin and Ferredoxin- Structure and classification.</p> <p>UNIT-III: Nitrogen fixation-Introduction, types of nitrogen fixing microorganisms. Nitrogenase enzyme - Metal clusters in nitrogenase- redox property - Dinitrogen complex transition metal complexes of dinitrogen - nitrogen fixation via nitride formation and reduction of dinitrogen to ammonia. Photosynthesis: photosystem-I and photosystem-II-chlorophylls structure and function.</p> <p>UNIT-IV: Metals in medicine: Metal Toxicity of Hg, Cd, Zn, Pb, As, Sb. Therapeutic Compounds: Vanadium-Based Diabetes Drugs; Platinum-Containing Anticancer Agents. Chelation therapy; Cancer treatment. Diagnostic Agents: Technetium Imaging Agents; Gadolinium MRI Imaging Agents. temperature and critical magnetic Field.</p> <p>UNIT-V: Enzymes -Introduction and properties -nomenclature and classification. Enzyme kinetics, free energy of activation and the effects of catalysis. Michaelis - Menton equation - Effect of pH, temperature on enzyme reactions. Factors contributing to the efficiency of enzyme.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)

Elective IV	23PCHEE25-2 : MATERIAL SCIENCE	Credit	3
I Year		Hours/Week	4
II Semester			
Objectives of the course	<ul style="list-style-type: none"> • To understand the crystal structure, growth methods and X-ray scattering. • To explain the optical, dielectric and diffusion properties of crystals. • To recognize the basis of semiconductors, superconductivity materials and magnets. • To study the synthesis, classification and applications of nanomaterials. • To learn about the importance of materials used for renewable energy conversion. 		
Course Outline	UNIT-I: Crystallography: symmetry - unit cell and Miller indices -crystal systems - Bravais lattices - point groups and space groups - X-ray diffraction-Laue equations-Bragg's law-reciprocal lattice and its application to geometrical crystallography. Crystal structure-powder and single crystal applications. Electron charge density maps, neutron diffraction-method and applications.		
	UNIT-II: Crystal growth methods: Nucleation-equilibrium stability and metastable state. Single crystal -Low and high temperature, solution growth-Gel and sol-gel. Crystal growthmethods-nucleation-equilibrium stabilityandmetastablestate.Singlecrystal-Lowandhightemperature, solution growth- Gel and sol-gel. Melt growth - Bridgeman-Stockbarger,Czochralskimethods.Fluxtechnique,physicalandchemical vapourtransport. Lorentz and polarization factor - primary and secondary extinctions.		
	UNIT-III: Properties of crystals: Optical studies - Electromagnetic spectrum (qualitative) refractive index – reflectance – transparency, translucency and opacity. Types of luminescence – photo-, electro-, and injection luminescence, LEDs – organic, Inorganic and polymer LED materials - Applications. Dielectric studies- Polarisation - electronic, ionic, orientation, and space charge polarisation. Effect of temperature. dielectric constant, dielectric loss. Types of dielectric breakdown-intrinsic, thermal, discharge, electrochemical and defect breakdown.		
	UNIT-IV: Special Materials: Superconductivity: Meissner effect, Critical temperature and critical magnetic Field, Type I and II superconductors, BCS theory-Cooper pair, Applications.Soft and hard magnets – Domain theory Hysteresis Loop-Applications. Magneto andgiant magneto resistance. Ferro, ferri and antiferromagnetic materials-applications, magnetic parameters for recording applications. Ferro-, Piezo-, and pyro electric materials – properties and applications. Shape memory Alloys-characteristics and applications, Non-linear optics-Second Harmonic Generators, mixing of Laser wavelengths by quartz, ruby and LiNbO ₃ .		
	UNIT-V: Materials for Renewable Energy Conversion: Solar Cells: Organic, bilayer, bulk heterojunction, polymer, perovskite based. Solar energy conversion: lamellar solids and thin films, dye-sensitized photo voltaic cells, coordination compounds anchored onto semiconductor surfaces - Ru(II) and Os(II) polypyridyl complexes. Photochemical activation and splitting of water, CO ₂ and N ₂ . Manganese based photo systems for water-splitting. Complexes of Rh, Ru, Pd and Pt - photochemical generation of hydrogen from alcohol.		

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able: CO1: To understand and recall the synthesis and characteristics of crystal structures,semiconductors, magnets, nanomaterials and renewable energy materials. CO2: To integrate and assess the structure of different materials and their properties. CO3: To analyse and identify new materials for energy applications. CO4: To explain the importance of crystal structures, piezoelectric and pyroelectricmaterials, nanomaterials, hard and soft magnets, superconductors, solar cells, electrodes, LEDuses, structures and synthesis. CO5: To design and develop new materials with improved property for energy applications.

PART-B	23PCHE26:INDUSTRIAL CHEMISTRY AND COMPUTATIONAL SOFTWARE IN CHEMISTRY	Credit	2
I Year		Hours/ Week	4
II Semester			
Objectives of the course	To gain knowledge about industrial fuels. To understand the importance of leather and water industry. To study about small scale industries. To impart skills on use of various chemistry tools that are essential for any student with chemistry as a major course. To learn the techniques of molecular simulations which will enhance the students employability in academia and industry.		
Course Outline	UNIT-I: Industrial fuels Fuels and Energy Resources: Types of fuels - liquid fuels - petroleum products – gaseous fuel - coal gas, producer gas and biogas - Rocket fuels - solid and liquid propellants - nuclear fuels - difference between nuclear and chemical fuels. Renewable sources of energy - solar energy, wind energy and tidal energy.		
	UNIT-II: Leather Industry and Water Industry Leather Industry: Curing-preservation and tanning of hides and skins- Process of dehairing and dyeing - Treatment of tannery effluents. Water Industry: Pollution of water by fertilizers, pesticides and industrial wastes -BOD-COD-thermal pollution. Reverse osmosis- softening of hard water.		
	UNIT-III: Small Scale Chemical Industries Electro thermal and electrochemical industries: electroplating - surface coating industries - oils, fats and waxes. Match industries and fireworks manufacture of some industrially important chemicals like potassium chlorate- and red phosphorus.		
	UNIT-IV: - BASICS IN COMPUTATIONAL CHEMISTRY Basic idea of Molecular Modelling – A brief introduction about computational methods and their applications in chemistry – Basic terminologies used in computational methods Computing software - introduction and stepwise approach to Chemdraw, ACD/Chemsketch, Argus Lab, preADMET, and SwissADME, SwissDock, 1 Lectures include entire process of downloading and installation of the software.		
	UNIT-V: HANDS ON EXERCISES The experiments are related to the topics covered in B.Sc - M.Sc Chemistry courses. The students must do the following exercises depending on the availability of time and suitable computational chemistry software. A. Drawing the structures of organic molecules and reaction schemes using Chemdraw or ACD/Chemsketch . B. For the following experiments, Argus Lab can be used. 1. Geometry optimization and single point energy calculations of simple organic molecules. 2. Calculation of energy gap between HOMO and LUMO in simple molecules and visualization of molecular orbitals. 3. Calculation of dipole moment in polar organic molecules. 4. Calculation of electrostatic charges of atoms in organic molecules using population analysis. 5. Calculation of IR stretching frequencies of groups and visualization of normal modes of vibration in organic molecules.		

	<p>6. Calculation of dimerization energy of carboxylic acids.</p> <p>C. Prediction of molecular properties, bioactivity and molecular docking of drug molecules. Prediction of drug likeliness, ADME and Toxicity of the drug classes like antibiotics, antihistamines, anesthetics and drug molecules of your choice using online servers preADMET or SwissADME or Swiss Dock.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>

III - SEMESTER	23PCHEC31: PHYSICAL CHEMISTRY-II	Credit	5
CORE - VII		Hours/Week	6
PART - A			

Prerequisites	Basic knowledge of physical chemistry
Objectives of the course	<p>To understand the essential characteristics of wave functions and need for the quantum mechanics.</p> <p>To know the importance of quantum mechanical models of particle in a box, rigid rotor and harmonic oscillator.</p> <p>To apply the quantum mechanics to hydrogen and polyelectronic systems.</p> <p>To familiarize the symmetry in molecules and predict the point groups.</p> <p>To predict the vibrational modes, hybridization using the concepts of group theory.</p>
Course Outline	<p>UNIT-I: Introduction to quantum mechanics Wave particle duality, Uncertainty principle, Particle wave and Schrodinger wave equation, wave function, -black body radiation, photoelectric effect, hydrogen spectrum. Need for quantum mechanics, Postulates of Quantum Mechanics, Schrodinger wave equation, Time independent and time dependent.</p> <p>UNIT-II: Quantum models: Particle in a box-1D, two dimensional and three-dimensional, degeneracy, application to linear conjugated molecular system, free particles, ring systems. Harmonic Oscillator-wave equation and solution, anharmonicity, force constant and its significance. Rigid Rotor-wave equation and solution, calculation of rotational constants and bond length of diatomic molecules.</p> <p>UNIT-III: Applications to Hydrogen and Poly electron atoms: Hydrogen atom and hydrogen like ions, Hamiltonian-wave equation and solutions, radial and angular functions, representation of radial distribution functions. Approximation methods – variation methods: trial wave function, variation integral and application to particle in 1dimensional box. Perturbation method - first order applications. Helium atom-electron spin, paulis exclusion principle and Slater determination.</p> <p>UNIT-IV: Group theory: Groups, sub groups, symmetry elements, operations, classification-axial and non-axial. Dihedral point groups- C_n, C_{nh}, D_n, D_{nh}, D_{nd}, T_d and O_h. Matrix representation and classes of symmetry operations, reducible irreducible and direct product representation. The Great orthogonality theorem – irreducible representation and reduction formula, construction of character table for C_{2v}, C_{2h}, C_{3v} and D_{2h} point groups.</p> <p>UNIT-V: Applications of quantum chemistry and group theory: Hydrogen Molecule-Molecular orbital theory and Heitler London (VB) treatment, Energy level diagram, Hydrogen molecule ion; Use of linear variation function and LCAO methods. Electronic conjugated system: Huckel method to Ethylene butadiene, cyclopropenyl, cyclo butadiene and Benzene. Applications of group theory to molecular vibrations, electronic spectra of ethylene</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

III - SEMESTER	23PCHEC32: COORDINATION CHEMISTRY – I	Credit	5
CORE -VIII		Hours/W eek	6
PART - A			

Prerequisites	Basic knowledge of inorganic chemistry
Objectives of the course	<p>To gain insights into the modern theories of bonding in coordination compounds.</p> <p>To learn various methods to determine the stability constants of complexes.</p> <p>To understand and construct correlation diagrams and predict the electronic transitions that are taking place in the complexes.</p> <p>To describe various substitution and electron transfer mechanistic pathways of reactions in complexes.</p> <p>To evaluate the reactions of octahedral and square planar complexes.</p>
Course Outline	<p>UNIT-I: Modern theories of coordination compounds: Crystal field theory - splitting of d orbitals in octahedral, tetrahedral and square planar symmetries - measurement of $10Dq$ - factors affecting $10Dq$ - spectrochemical series - crystal field stabilisation energy for high spin and low spin complexes- evidences for crystal field splitting - site selections in spinels and antispinel - Jahn Teller distortions and its consequences. Molecular Orbital Theory and energy level diagrams concept of Weak and strong fields, Sigma and pi bonding in octahedral, square planar and tetrahedral complexes.</p> <p>UNIT-II: Spectral characteristics of complexes: Term states for d ions - characteristics of d-d transitions - charge transfer spectra - selection rules for electronic spectra - Orgel correlation diagrams - Sugano-Tanabe energy level diagrams - nephelauxetic series - Racah parameter and calculation of inter-electronic repulsion parameter.</p> <p>UNIT-III: Stability and Magnetic property of the complexes: Stability of complexes: Factors affecting stability of complexes, Thermodynamic aspects of complex formation, Stepwise and overall formation constants, Stability correlations, statistical factors and chelate effect, Determination of stability constant and composition of the complexes: Formation curves and Bjerrum's half method, Potentiometric method, Spectrophotometric method, Polarographic method. Magnetic property of complexes: Spin-orbit coupling, effect of spin-orbit coupling on magnetic moments, quenching of orbital magnetic moments.</p> <p>UNIT-IV: Kinetics and mechanisms of substitution reactions of octahedral and square planar complexes: Inert and Labile complexes; Associative, Dissociative and SNCB mechanistic pathways for substitution reactions; acid and base hydrolysis of octahedral complexes; Classification of metal ions based on the rate of water replacement reaction and their correlation to Crystal Field Activation Energy; Substitution reactions in square planar complexes: Trans effect, theories of trans effect and applications of trans effect in synthesis of square planar compounds; Kurnakov test.</p> <p>UNIT-V: Electron Transfer reactions in octahedral complexes: Outer sphere electron transfer reactions and Marcus-Hush theory; inner sphere electron transfer reactions; nature of the bridging ligand in inner sphere electron transfer reactions. Photo-redox, photo-substitution and photo-isomerisation reactions in complexes and their applications.</p>
Extended Professional Component (is a part of internal)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved</p> <p>(To be discussed during the Tutorial hours)</p>

Course Learning Outcomes (for Mapping with POs and PSOs)

Students will be able:

CO1: Understand and comprehend various theories of coordination compounds.

CO2: Understand the spectroscopic and magnetic properties of coordination complexes.

CO3: Explain the stability of complexes and various experimental methods to determine the stability of complexes.

CO4: Predict the electronic transitions in a complex based on correlation diagrams and UV-visible spectral details.

CO5: Comprehend the kinetics and mechanism of substitution reactions in octahedral and square planar complexes.

III - SEMESTER	23PCHEP33: PHYSICAL CHEMISTRY PRACTICAL	Credit	5
CORE - IX		Hours/Week	6
PART-A			

	-	1	5	6
Prerequisites	Basic knowledge of physical chemistry			
Objectives of the course	<p>To understand the principle of conductivity experiments through conductometric titrations.</p> <p>To evaluate the order of the reaction, temperature coefficient, and activation energy of the reaction by following pseudo first order kinetics.</p> <p>To construct the phase diagram of two component system forming congruent melting solid and find its eutectic temperatures and compositions.</p> <p>To determine the kinetics of adsorption of oxalic acid on charcoal.</p> <p>To develop the potential energy diagram of hydrogen ion, charge density distribution and Maxwell's speed distribution by computational calculation.</p>			
Course Outline	<p>UNIT-I: Conductivity Experiments</p> <ol style="list-style-type: none"> 1. Determination of equivalent conductance of a strong electrolyte & the verification of DHO equation. 2. Verification of Ostwald's Dilution Law & Determination of pKa of a weak acid. 3. Verification of Kohlrausch's Law for weak electrolytes. 4. Determination of solubility of a sparingly soluble salt. 5. Acid-base titration (strong acid and weak acid vs NaOH). 6. Precipitation titrations (mixture of halides only). <p>UNIT-II: Kinetics</p> <ol style="list-style-type: none"> 1. Study the kinetics of acid hydrolysis of an ester, determine the temperature coefficient and also the activation energy of the reaction. 2. Study the kinetics of the reaction between acetone and iodine in acidic medium by half-life method and determine the order with respect to iodine and acetone. <p>UNIT-III: Phase diagram</p> <p>Construction of phase diagram for a simple binary system</p> <ol style="list-style-type: none"> 1. Naphthalene-phenanthrene 2. Benzophenone- diphenyl amine <p>Adsorption</p> <p>Adsorption of oxalic acid on charcoal & determination of surface area (Freundlich isotherm only).</p>			
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>			
Skills acquired from this course	<p>Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.</p>

III - SEMESTER	23PCHEP34: ANALYTICAL INSTRUMENTATION TECHNIQUES PRACTICALS	Credit	4
CORE - X		Hours/Week	6
PART-A			

Prerequisites	
Objectives of the course	<p>To analyze different constituents through instrumental methods of analysis.</p> <p>To evaluate different contaminants in materials using turbidimetry and conductivity measurements.</p> <p>To design experiments for analysis of inorganic and organic materials.</p> <p>To analyze constituents in materials using emission and absorption techniques.</p>
Course Outline	<p>UNIT-I:</p> <ol style="list-style-type: none"> 1. Determination of the equivalent conductance of a weak acid at different concentrations and verifying Ostwald dilution law. Calculation of the dissociation constant of the acid. 2. Determination of the equivalent conductance of a strong electrolyte at different concentrations and examining the validity of the Onsager's theory as limiting law at high dilutions. 3. Conductometric titration of a mixture of HCl and CH₃COOH Vs NaOH. 4. Conductometric titration of NH₄Cl Vs NaOH. 5. Conductometric titration of CH₃COONa Vs HCl. 6. Potentiometric titration of a mixture of HCl and CH₃COOH Vs NaOH 7. Determination of pK_a of weak acid by EMF method. 8. Potentiometric titration of FAS Vs K₂Cr₂O₇ 9. Potentiometric titration of KI Vs KMnO₄. 10. Potentiometric titration of a mixture of Chloride and Iodide Vs AgNO₃. 11. Determination of the pH of buffer solution by EMF method using Quinhydrone and Calomel electrode. 12. Study of the inversion of cane sugar in the presence of acid by Polarimetric method. <p>UNIT-II:</p> <ol style="list-style-type: none"> 1. Estimation of Na and K by flame photometric method. 2. Determination of the amount (mol/L) of ferricyanide present in the given solution using cyclic voltammetry. 3. Determination of the diffusion coefficient of ferricyanide using cyclic voltammetry. 4. Determination of the standard redox potential of ferri-ferrocyanide redox couple using cyclic voltammetry. 5. Estimation of the amount of sulphate present in the given solution using Nephelometric turbidimeter. 6. Heavy metal analysis in textiles and textile dyes by AAS 7. Determination of Stern-Volmer constant of Iodine quenching by fluorimetry 8. Determination of ascorbic acid in real samples using Differential Pulse Voltammetry and comparing with specifications <p>UNIT-III: Interpretation and identification of the given spectra of various organic compounds arrived at from the following instruments</p> <ol style="list-style-type: none"> 1. UV-Visible 2. IR 3. Raman 4. NMR 5. ESR 6. Mass etc.,

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able: CO1: To recall the principles associated with various inorganic organic and physical chemistry experiments CO2: To scientifically plan and perform all the experiments CO3: To observe and record systematically the readings in all the experiments CO4: To calculate and process the experimentally measured values and compare with graphical data. CO5: To interpret the experimental data scientifically to improve students efficiency for societal developments.

III - SEMESTER	23PCHEE35-1: PHARMOCOGNOSY AND PHYTOCHEMISTRY	Credit	3
ELECTIVE - V		Hours/Week	3
PART-A			

Prerequisites	Basic knowledge of chemistry
Objectives of the course	<p>To familiarize the guidelines of WHO and different sampling techniques.</p> <p>To develop the knowledge of natural products, biological functions and pharmacological uses.</p> <p>To develop knowledge on primary and secondary metabolites and their sources.</p> <p>To understand the concepts of isolation methods and separation of bioactive compounds.</p> <p>To provide the knowledge on selected glycosides and marine drugs.</p>
Course Outline	<p>UNIT-I: Pharmacognosy and Standardization of Herbal drugs: Introduction, definition, development classification and Source of Drugs: Biological and mineral. Study of pharmacognosics of a crude drug. Standardization of Herbal drugs. WHO guidelines, Sampling of crude drug, Methods of drug evaluation. Phytochemical investigations-General chemical tests.</p> <p>UNIT-II: Extraction Techniques: General methods of extraction, types – maceration, Decoction, percolation, Immersion and Soxhlet extraction. Advanced techniques- counter current, Steam distillation, supercritical gases, Sonication, Micro waves assisted extraction. Factors affecting the choice of extraction process.</p> <p>UNIT-III: Drugs containing Terpenoids and volatile oils: Terpenoids: Classification, Isoprene rule, Isolation and separation techniques, General properties Camphor, Menthol, Eucalyptol. Volatile Oils or Essential Oils: Method of Preparations, Classifications of Volatile oils, Camphor oil, Geranium oil, Citral- Structure uses. Pentacyclic triterpenoids: amyrines; taraxasterol: Structure and pharmacological applications.</p> <p>UNIT-IV: Drugs containing alkaloids: Occurrence, function of alkaloids in plants, pharmaceutical applications. Isolation, Preliminary Qualitative tests and general properties. General methods of structural elucidation. Morphine, Reserpine, papaverine - chemical properties, structure and uses. Papaverine-structure, chemical properties and uses.</p> <p>UNIT-V: Plant Glycosides and Marine drugs: Glycosides: Basic ring system, classification, isolation, properties, qualitative analysis. Pharmacological activity of Senna glycosides, Cardiacglycosides- Digoxin, digitoxin, Steroidal saponins glycosides- Diosgenin, hecogenin. Marine drugs -Selected Drug Molecules: Cardiovascular active substances, Cytotoxic compounds, antimicrobial compounds, antibiotic compounds, Marine toxins.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.
Recommended Text	<p>1. Gurdeep R Chatwal (2016), Organic chemistry of Natural products, Volume I&II, 5th edition, Himalaya publishing House.</p> <p>2.S.V.Bhat, B.A. Nagasampagi, M.Sivakumar (2014), Chemistry of Natural Products, Revised edition, Narosa Publishers.</p>

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able: CO1: To recall the sources of natural medicines and analysis of crude drugs. CO2: To understand the methods of evaluation based on various parameters. CO3: To analyze the isolated drugs CO4: To apply various techniques to discover new alternative medicines. CO5: To evaluate the isolated drugs for various pharmacological activities

III - SEMESTER	23PCHEE35-2:BIOMOLECULES AND HETEROCYCLIC COMPOUNDS	Credit	3
ELECTIVE – V		Hours/Week	3
PART-A			

Prerequisites	Basic knowledge of chemistry
Objectives of the course	<p>To learn the basic concepts and biological importance of biomolecules and natural products.</p> <p>To explain several of functions of carbohydrates, proteins, nucleic acids, steroids and hormones.</p> <p>To understand the functions of alkaloids and terpenoids.</p> <p>To elucidate the structure determination of biomolecules and natural products.</p> <p>To extract and construct the structure of new alkaloids and terpenoids from different methods.</p>
Course Outline	<p>UNIT-I:Chemistry and metabolism of carbohydrates: Definition, classification and biological role of carbohydrates. Monosaccharides: Linear and ring structures (Haworth formula) of ribose, glucose, fructose and mannose (structure determination not required), physical and chemical properties of glucose and fructose. Disaccharides: Ring structures (Haworth formula) – occurrence, physical and chemical properties of maltose, lactose and sucrose. Polysaccharides: Starch, glycogen and cellulose – structure and properties, glycolysis of carbohydrates.</p> <p>UNIT-II: Steroids and Hormones: Steroids-Introduction, occurrence, nomenclature, configuration of substituent's. Diels' hydrocarbon, stereochemistry, classification, Diels' hydrocarbon, biological importance, colour reactions of sterols, cholesterol-occurrence, tests, physiological activity, biosynthesis of cholesterol from squalene. Hormones-Introduction, classification, functions of sex hormones- androgens and estrogens, adrenocortical hormones-cortisone and cortisol structure and functions of non-steroidal hormones-adrenaline and thyroxine.</p> <p>UNIT-III: Proteins Separation and purification of proteins – dialysis, gel filtration and electrophoresis. Catabolism of amino acids - transamination, oxidative deamination and decarboxylation. Biosynthesis of proteins</p> <p>UNIT-IV: Nucleic acids Role of nucleic acids. Amino acid metabolism and urea cycle. Structure, methods for the synthesis of nucleosides - direct combination, formation of heterocyclic base and nucleoside modification, conversion of nucleoside to nucleotides. Primary and secondary structure of RNA and DNA, Watson-Crick model, solid phase synthesis of oligonucleotides.</p> <p>UNIT-V: Fused Ring Heterocyclic Compounds: Benzofused five membered rings: Indole, isoindole, benzofuran and benzothiophene, Preparation and properties. Benzofused six membered rings: Quinoline and isoquinoline: Preparation by ring closure reactions, Reactions: Mechanism of electrophilic and nucleophilic substitutions, oxidation and reduction reactions.</p>
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)</p>

III - SEMESTER	<u>SKILL ENHANCEMENT COURSE (SEC-II)</u> 23PCHE36: POLYMER CHEMISTRY	Credit	2
SEC - II		Hours/Week	3
PART-B (i)			

Prerequisites	Basic knowledge of general chemistry
Objectives of the course	<p>To learn the basic concepts and bonding in polymers.</p> <p>To explain various types of polymerization reactions and kinetics.</p> <p>To understand the importance of industrial polymers and their synthetic uses.</p> <p>To determine the molecular weight of polymers.</p> <p>To predict the degradation of polymers and conductivities.</p>
Course Outline	<p>UNIT-I: Characterization, Molecular weight and its Determination: Primary and secondary bond forces in polymers; Cohesive energy, molecular structure, chemical tests, thermal methods, T_g, molecular distribution, stability. Determination of Molecular mass of polymers: Number Average molecular mass (M_n) and Weight average molecular mass (M_w) of polymers. Molecular weight determination of high polymers by physical methods.</p> <p>UNIT-II: Mechanism and kinetics of Polymerization: Chain growth polymerization: Cationic, anionic, free radical polymerization, Stereo regular polymers: Ziegler Natta polymerization. Reaction kinetics. Step growth polymerization, Degree of polymerization.</p> <p>UNIT-III: Techniques of Polymerization and Polymer Degradation: Bulk, Solution, Emulsion, Suspension, solid, interfacial and gas phase polymerization. Types of Polymer Degradation, Thermal degradation, mechanical degradation, photodegradation, Photostabilizers, Solid and gas phase polymerization.</p> <p>UNIT-IV: Industrial Polymers: Preparation of fibre forming polymers, elastomeric material. Thermoplastics: Polyethylene, Polypropylene, Polystyrene, Polyacrylonitrile, PolyVinyl Chloride, Polytetrafluoroethylene, Nylon and Polyester. Thermosetting Plastics: Phenol formaldehyde and Epoxideresin. Elastomers: Natural rubber and synthetic rubber - Buna - N, Buna-S and Neoprene.</p> <p>UNIT-V: Polymer Processing: Compounding: Polymer Additives: Fillers, Plasticizers, antioxidants, thermal stabilizers, fire retardants and colourants. Processing Techniques: Calendaring, die casting, compression moulding, injection moulding, blow moulding and reinforcing. Film casting, Thermofoaming, Foaming.</p>

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	<p>Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE / TNPSC others to be solved</p> <p>(To be discussed during the Tutorial hours)</p>
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs)

Students will be able:

CO1: To understand the bonding in polymers.

CO2: To scientifically plan and perform the various polymerization reactions.

CO3: To observe and record the processing of polymers.

CO4: To calculate the molecular weight by physical and chemical methods.

CO5: To interpret the experimental data scientifically to improve the quality of synthetic polymers.

III - SEMESTER	23PCHEI37: SUMMER INTERNSHIP	Credit	2
		Hours/Week	--
PART-B (ii)			

PG programs, Training in a reputed Industry/Research lab for a period of 15 days will be Carried out in Summer Vacation at the end of I year is given 0:0:2 credits (Course code: 23CHEI37).

Report -75 Marks

Viva -25 Marks

Internal - 100 Marks

(Refer to the regulations for additional information)

IV - SEMESTER	23PCHC41: COORDINATION CHEMISTRY – II	Credit	5
CORE - XI		Hours/Week	6
PART-A			

Prerequisites	Basic knowledge of inorganic chemistry
Objectives of the course	<p>To recognize the fundamental concepts and structural aspects of organo metallic compounds.</p> <p>To learn reactions of organometallic compounds and their catalytic behaviour.</p> <p>To identify or predict the structure of coordination compounds using spectroscopic tools.</p> <p>To understand the structure and bonding in coordination complexes.</p> <p>To evaluate the spectral characteristics of selected complexes.</p>
Course Outline	<p>UNIT-I: Chemistry of organo metallic compounds: Classification of organo metallic compounds based on M-C bond – 18 and 16 electron rule; Bonding in metal – olefin complexes (example: Ziese's salt), metal-acetylene and metal-allyl complexes; Metal-cyclopentadienyl complexes – Examples and MO approach to bonding in metallocenes; fluxional isomerism. Metal – carbonyl complexes: MO diagram of CO; Structure and bonding – bonding modes, MO approach of M-CO bonding, π-acceptor nature of carbonyl group, synergistic effect (stabilization of lower oxidation states of metals); Carbonyl clusters: Low nuclearity and high nuclearity carbonyl clusters – Structures based on polyhedral skeleton electron pair theory or Wade's rule.</p> <p>UNIT-II: Reactions and catalysis of organometallic compounds: Reactions of organometallic compounds: Oxidative addition, reductive elimination (α and β eliminations), migratory insertion reaction and metathesis reaction. Organo-metallic catalysis: Hydrogenation of olefins (Wilkinson's catalyst), hydroformylation of olefins using cobalt or rhodium catalysts (oxo process), oxidation of olefin (Wacker process), olefin isomerisation, water gas shift reaction, cyclo-oligomerisation of acetylenes using Reppe's catalysts, Monsanto process.</p> <p>UNIT-III: Inorganic spectroscopy -I: IR spectroscopy: Effect of coordination on the stretching frequency-sulphato, carbonato, sulphito, aqua, nitro, thiocyanato, cyano, thiourea, DMSO complexes; IR spectroscopy of carbonyl compounds. NMR spectroscopy- Introduction, applications of ^1H, ^{15}N, ^{19}F, ^{31}P-NMR spectroscopy in structural identification of inorganic complexes, fluxional molecules, quadrupolar nuclei- effect in NMR spectroscopy.</p> <p>UNIT-IV: Inorganic spectroscopy-II: Introductory terminologies: g and A parameters-definition, explanation and factors affecting g and A; Applications of ESR to coordination compounds with one and more than one unpaired electrons – hyperfine and secondary hyperfine splitting and Kramer's doublets; ESR spectra of V(II), Mn(II), Fe(II), Co(II), Ni(II), Cu(II) complexes, bis(salicylaldimine)copper(II) and $[(\text{NH}_3)_5\text{Co}-\text{O}_2-\text{Co}(\text{NH}_3)_5]^{5+}$. Mossbauer spectroscopy – Mossbauer effect, Recoil energy, Mossbauer active nuclei, Doppler shift, Isomer shift, quadrupole splitting and magnetic interactions. Applications of Mössbauer spectra to Fe and Sn compounds.</p> <p>UNIT-V: Photo Electron Spectroscopy: Theory, Types, origin of fine structures - shapes of vibrational fine structures – adiabatic and vertical transitions, PES of homonuclear diatomic molecules (N_2, O_2) and heteronuclear diatomic molecules (CO, HCl) and polyatomic molecules (H_2O, CO_2, CH_4, NH_3) – evaluation of vibrational constants of the above molecules. Koopman's theorem- applications and limitations. Optical Rotatory Dispersion – Principle of CD and ORD; Δ and λ isomers in complexes, Assignment of absolute configuration using CD and ORD techniques.</p>

Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

IV - SEMESTER	23PCHEC42: ORGANIC SYNTHESIS AND PHOTOCHEMISTRY	Credit	5
CORE - XII		Hours/Week	6
PART-A			

Prerequisites	Basic knowledge of organic chemistry
Objectives of the course	<p>To understand the molecular complexity of carbon skeletons and the presence of functional groups and their relative positions.</p> <p>To study various synthetically important reagents for any successful organic synthesis.</p> <p>To apply disconnection approach and identifying suitable synthons to effect successful organic synthesis.</p> <p>To learn the concepts of pericyclic reaction mechanisms.</p> <p>To gain the knowledge of photochemical organic reactions.</p>
Course Outline	<p>UNIT-I: Planning an Organic Synthesis and Control elements: Retrosynthetic analysis and designing of the synthesis;</p> <p>Disconnection approach: An introduction to synthons, synthetic equivalents, disconnection approach, functional group interconversions, importance of order of events in organic synthesis.</p> <p>One group C-C Disconnections: Alcohols, carbonyls, Dicarboxyls (1,3-dicarboxyls, 1,4- dicarboxyls, 1,5-dicarboxyls and 1,6- dicarboxyls) Alkene synthesis, use of acetylenes and aliphatic nitro compounds in organic synthesis.</p> <p>Two group C-C Disconnections: Diels-Alder reactions, 1,3 difunctionalized compounds and α, β-unsaturated compounds, control in carbonyl condensations, Michael addition and Robinson annulation.</p> <p>UNIT – II: Modern synthetic methods, reactions and reagents Principles and synthetic processes involving phase transfer catalysis, (Nitriles from Alkyl halides, Alcohol from Alkyl halides) Polymer supported reagents (Synthesis of oligo saccharides), (Microwave assisted Organic synthesis – Esterification, deacetylation and hydrolysis). Protection and deprotection of hydroxyl, carbonyls in aldehydes and ketones, amines, carboxylic acids, alkenes and alkynes. Synthesis based on umpolung concepts of Seebach. Illustration of protection and deprotection in synthesis. Use of protective groups, activating groups, and bridging elements.</p> <p>UNIT-III: Pericyclic Reactions: Woodward Hoffmann rules; The Mobius and Huckel concept, FMO, PMO method and correlation diagrams. Cycloaddition and retrocycloaddition reactions; [2+2], [2+4], [4+4], Cationic, anionic, and 1,3-dipolar cycloadditions. Cheletropic reactions. ; Electrocyclization and ring opening reactions of conjugated dienes and trienes. Sigmatropic rearrangements: (1,3), (1,5), (3,3) and (5,5)-carbon migrations, degenerate rearrangements. Ionic sigmatropic rearrangements. Regioselectivity, stereoselectivity and periselectivity in pericyclic reactions.</p> <p>UNIT-IV: Organic Photochemistry-I: Photochemical excitation: Experimental techniques; electronic transitions; Jablonskii diagrams; intersystem crossings; energy transfer processes; Stern Volmer equation. Reactions of electronically excited ketones; $\pi \rightarrow \pi^*$ triplets; Norrish type-I and type-II cleavage reactions; photo reductions; Paterno-Buchi reactions;</p>

	UNIT-V: Organic Photochemistry-II: Photochemistry of α,β -unsaturated ketones; cis-trans isomerisation. Photon energy transfer reactions, Photo cycloadditions, Photochemistry of aromatic compounds; photochemical rearrangements; di- π -methane rearrangement; Reaction of conjugated cyclohexadienone to 3,4-diphenyl phenols; Barton's reaction.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able: CO1: To recall the basic principles of organic chemistry and to understand the various reactions of organic compounds with reaction mechanisms. CO2: To understand the versatility of various special reagents and to correlate their reactivity with various reaction conditions. CO3: To implement the synthetic strategies in the preparation of various organic compounds. CO4: To predict the suitability of reaction conditions in the preparation of tailor-made organic compounds. CO5: To design and synthesize novel organic compounds with the methodologies learnt during the course.

IV - SEMESTER	23PCHE43: PROJECT WORK WITH VIVA VOCE	Credit	7
		Hours/Week	10
PART-A			

COURSE OBJECTIVES

Make the students to

- 1) Understand the importance of experimental analysis, scientific approach in solving problems related to the environment and society
- 2) Educate and train the students to write scientific papers.

Individual Project and Viva Voce

Each faculty will be allotted 2/3 students. A specific problem will be assigned to the students or they will be asked to choose a problem/area of interest. The topic/area of work will be finalized at the end of III semester, allowing scope for the students to gather relevant literature during the vacation. The research work can be carried out in the college or at any other organization approved by the guide and the HOD. Viva Voce/presentation will be conducted by a panel comprising of HOD, internal / external examiners. A power point presentation by the student before the audience will be evaluated on the basis of student's response to the questions.

Suggested areas of work

Synthetic Organic Chemistry, Coordination Chemistry, Corrosion Studies, Environmental Chemistry, Polymer Chemistry, Phytochemistry, Nanochemistry, Physical Chemistry.

Methodology

Each project should contain the following details:

- 1) Brief introduction on the topic
- 2) Review of Literature
- 3) Materials and Methods
- 4) Results and Discussions – evidences in the form of figures, tables and photographs
- 5) Conclusion / Summary
- 6) Bibliography

Evaluation - Total - 100 Marks (Internal – 25 marks, External – 75 marks)

Internal Total - 25 marks

I Review – Selection of the field of study, Topic & Literature collection - 5 marks

II Review – Research Design and Data Collection - 10 marks

III Review – Analysis & Conclusion, Preparation of rough draft - 10 marks

External Total – 75 marks

Project Total – 60 marks + Viva -15 marks

Relevance of the topic to the academic / society - 10 Marks

Objectives - 10 Marks

Experimental design - 20Marks

Expression of results and discussion - 20 Marks

Viva Voce Total – 15 marks

Presentation - 10 Marks

Discussion - 5 Marks

(Refer to the regulations for additional information)

PROGRAMME OUTCOME

- 1) To demonstrate systematic and coherent understanding of the fundamental concepts in physical Chemistry, Organic Chemistry, Inorganic Chemistry and all the other related chemistry subjects
- 2) Identify chemical formulae and acquire ability and skills to become expertise over solving both theoretical and applied chemistry pattern
- 3) Apply laboratory skills to solve unseen chemical problems both qualitative and quantitative by interpretation and manipulation of experimental data.
- 4) Ability to function as responsible individuals with ethical value and to follow the correct procedures and regulations for safe handling and usage of chemicals.
- 5) Communicate effectively various aspects of chemistry to present chemical research results to a technically literate audience by means of an oral presentation, scientific poster or a written report.

IV - SEMESTER	23PCHEE44: THEORY AND PREPARATION OF CONSUMER PRODUCTS	Credit	3
ELECTIVE - VI		Hours/Week	4
PART-A			

(20% Theory + 80% Practical)

Prerequisites	Basic concepts of Consumer Products
Objectives of the course	To provide basic knowledge in consumer products in chemistry and modern trend in Industry.
Course Outline	UNIT-I Saponification of oils and fats. Manufacture of soaps. Formulation of toilet soaps. Different ingredients used. Their functions. Mechanism of action of soap. ISI specifications. Testing procedures/limits. Anionic detergents: Manufacture of LAB (linear alkyl benzene). Sulphonation of LAB preparation of acid slurry. Different ingredients in the formulation of detergent powders and soaps. Liquid detergents. Foam boosters. AOS (alpha olefin sulphonates. cationic detergents: examples. Manufacture and applications. Mechanism of action of detergents Comparison of soaps and detergents. Biodegradation – environmental effects. ISI specifications / limits
	UNIT-II: Shampoos Manufacture of SLS and SLES. Ingredients. Functions. Different kinds of shampoos – anti-dandruff, anti-lice, herbal and baby shampoos. Hair dye. Manufacture of conditioners. Coco betaines or coco diethanolamides – ISI specifications. Testing procedures and limit
	Preparation of following Consumer Products 1. Soaps 2. Laundry Detergents 3. Shampoos 4. Talc powder 5. Incense sticks 6. Tooth paste 7. Candles 8. Lysol 9. Disinfectants 10. Hand wash soaps
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

SCHEME OF EVALUATION:

Evaluation is to be done both for theory (15 marks) and practical (60 marks) components separately by the examiners who will be conducting the practical and the marks should be awarded out of 75. Questions for the theory and practical are to be set by the concerned examiners.

UNIVERSITY EXAMINATION	Marks
Any Two questions	15
Procedure	10
Preparation	40
Record	10
Total	75

INTERNAL ASSESSMENT	Marks
Attendance / Regularity	10
skill	15
Total	25

IV - SEMESTER	<u>SKILL ENHANCEMENT COURSE (SEC- III)</u> 23PCHE45: CHEMISTRY FOR ADVANCED RESEARCH STUDIES (Practical)	Credit	2
SEC III		Hours/Week	4
PART-B			

Prerequisites	
Objectives of the course	<p>To design chromatographic methods for identification of species.</p> <p>To analyze different constituents through instrumental methods of analysis.</p> <p>To evaluate different contaminants in materials using turbidimetry and conductivity measurements.</p> <p>To design experiments for analysis of inorganic and organic materials.</p> <p>To analyze constituents in materials using emission and absorption techniques.</p>
Course Outline	UNIT I SPECTROMETRIC AND COLORIMETRIC TECHNIQUES UV, IR, NMR, Mass Spectroscopy: Principle, techniques and applications. Colorimetric methods: Basic principles and applications.
	UNIT II CHROMATOGRAPHIC AND EXTRACTION TECHNIQUES Paper, Column, Thin Layer, Gas, Liquid, High Performance liquid Chromatography :Introduction, Characteristic features, Applications. Extraction of Natural products: Basic ideas and applications.
	UNIT III ANY TEN EXPERIMENTS FROM THE FOLLOWING <ol style="list-style-type: none"> 1. Determination of spectrophotometrically the mole ratio of the ferrithiocyanate complex and equilibrium constant for the complex formation. 2. Estimation of the amount of nitrate present in the given solution using spectrophotometric method. 3. Assay of Riboflavin and Iron in tablet formulations by spectrophotometry 4. Estimation of chromium in steel sample by spectrophotometry 5. Estimation of Fe(II) by 1,10 phenanthroline using spectrophotometry 6. Study the kinetics of enzyme catalysed reactions (Activity of tyrosinase upon tyrosine spectrophotometrically) 7. Estimation of Fe, Cu and Ni by colorimetric method. 8. Estimation of chlorophyll in leaves and phosphate in waste water by colorimetry. 9. Determination of caffeine in soft drinks by HPLC 10. Analysis of water quality through COD, DO, BOD measurements. 11. Separation of (a) mixture of Azo dyes by TLC (b) mixture of metal ions by Paper chromatography. 12. Extraction of piperine from black pepper. 13. Extraction of caffeine from tea leaves. 14. Column chromatography - Separation of anthracene and picric acid from anthracene picrate. 15. Thin layer chromatography - Separation of green leaf pigments. 16. Paper chromatography - Identification of amino acid.
Extended Professional Component (is a part of internal component only, Not to be included in the external examination question paper)	Questions related to the above topics, from various competitive examinations UPSC / TRB / NET/ UGC-CSIR / GATE /TNPSC others to be solved (To be discussed during the Tutorial hours)
Skills acquired from this course	Knowledge, Problem solving, Analytical ability, Professional Competency, Professional Communication and Transferable skills.

Course Learning Outcomes (for Mapping with POs and PSOs) Students will be able: CO1: To recall the principles associated with various inorganic organic and physical chemistry experiments CO2: To scientifically plan and perform all the experiments CO3: To observe and record systematically the readings in all the experiments CO4: To calculate and process the experimentally measured values and compare with graphical data. CO5: To interpret the experimental data scientifically to improve students efficiency for societal developments.
